

SPATIAL AND SPATIO-TEMPORAL MODELS WITH INLABRU

Pamplona, 17 June 2026

Jafet Belmont, Sara Martino and Janine Illian

1 Welcome to the course!

- Welcome to the `inlabru` workshop at Geomed, Zaragoza!
- The aim of this workshop is to introduce you to the `inlabru` package, in particular the temporal, spatial and spatio-temporal modelling is implemented in it – and some of its features.
- Workshop materials are available in the github repository

 Important! □

Please use the instructions provided [here](#) to install and check your installation *before* the course starts.

2 Learning Objectives for the workshop

At the end of the workshop, participants will have an understanding of:

- basic and advanced `inlabru` syntax
- statistical models used to analyse spatial and spatio-temporal data
- the implementation of statistical models used to analyse spatial and spatio-temporal data in the `inlabru` package

3 Intended audience

The workshop aims to cater for participants with a range of different backgrounds, with some experience in spatial and spatio-temporal statistical modelling approaches.

4 Prerequisites

Participants should be familiar with the R environment, and general statistical approaches for modelling such as regression, analysis of (co)variance, and generalized linear models as well as a basic knowledge of different spatial data types and modelling approaches.

No knowledge of R-INLA or `inlabru` is required.

5 Schedule

NOTE The schedule is indicative and might change as we work through the material.

5.0.1 Structure

Time	Topic
9:00 - 9:30	Session 1: Introduction to inlabru
9:30 - 10:00	Practical Session 1
	Practical Session 2
10:00 - 11:00	Session 2: Spatial modelling with inlabru
11:00 - 11:30	Practical Session 3
11:30 - 11:45	Session 3: Spatial-temporal modelling with inlabru
11:45 - 12:00	Session 4: Multiple likelihood models in inlabru
